

The new release SimEx R1.2 supports meta model based conversion of MATLAB/Simulink models into XML format

Berlin in May 2006 - IT Power Consultants now released the new version of SimEx (R1.2), the tool for the conversion of MATLAB® / Simulink® models into the XML format (and vice versa).

In the new version of SimEx 1.2 there are two conversion modes available: in addition to the minimal DTD there is now a comprehensive meta model based DTD, which is universally usable for all MATLAB/Simulink models. The new GUI additionally allows a batch mode conversion now.

The conversion tool SimEx can be applied versatilely in the model based development process. The generic XML format enables an integrated tool environment, where the Simulink / Stateflow models can be used in different tools.

About IT Power Consultants

IT Power Consultants combines convincing core-competencies from the field of quality assurance and the development of software-development tools to innovative services and products for software development in the automotive industry. For additional information, visit www.itpower.de.
