

Transparency in the development process is the key for efficiency!

September 2005, Berlin. An efficient development process is the goal of many enterprises. It does not only avoid unnecessary costs caused by additional loops in the development process, but moreover ensures the quality of the system to be developed.

This topic will be the focus of the Telelogic User Conference 2005 which will take place from 9th to 11th of November in Berlin. Innovative, practise-proved solutions delivering transparency in the development process will be introduced and discussed at the conference. Furthermore, it will be presented how Telelogic's products will contribute to transparency in the development process.

As an expert for all phases of the development process of automotive ECU software IT Power Consultants will present its solution ensuring the traceability of requirements and tests at the conference's exhibition.

During the development process upcoming questions such as "Which requirements does test x cover?" or "Have all requirements been tested?" demonstrate the necessity of traceability. Every moment one has to be able to determine which tests cover which requirements and which requirements have been covered by which tests.

Therefore, deployed tools for requirements management and test have to be linked. Such a tool coupling and the corresponding application scenario with the tools DOORS for requirements management and CTE XL for test case specification will be introduced by IT Power Consultants at the User Conference.
