

IT Power Consultants joint the Telelogic Alliance Partner Program

Berlin, November 2006 - IT Power Consultants, a specialist for all phases of the development process of automotive ECU software, entered as a member into the Telelogic Alliance Partner Program. Telelogic is the leading global provider of software and services for Enterprise Lifecycle Management (ELM). Award winning Telelogic products go beyond Requirements Management and Application Lifecycle Management (ALM) by combining the voice of the customer with business objectives to drive development of products, applications, advanced systems and software.

As an official partner of Telelogic Germany in the context of requirements management IT Power Consultants supports its customers to accomplish their projects more efficiently and produce high quality results.

This partnership is based on IT Power Consultants' profound experience in the deployment of Telelogic DOORS within the development process of automotive ECU software. The specialized methodical and technical know-how of the company services encompasses requirements-driven testing, requirements-driven software design as well as the definition of information models for the automotive ECU development process.

Comprehensive requirements management, as supported by DOORS, plays a decisive role in a systematic development process. For example, test cases as well as software design are defined based on the requirements. In order to demonstrate which requirement is tested by which test case, it is essential to link the requirements with the test cases. The same is true for the links between requirements and design elements.

The key for an efficient development process, which is able to produce high quality results, is a sustainable integration of requirements management into all development phases as well as a requirements-based approach.

„We are pleased to be a member of the Telelogic Alliance Partner Program“, said Dr. Sadegh Sadeghipour, Managing Director of IT Power Consultants, „thanks to the partnership we are able to offer our services to Telelogic customers and contribute to a systematic deployment of Telelogic DOORS and its integration into the development process of automotive ECU software“.

About IT Power Consultants

IT Power Consultants combines convincing core-competencies from the field of quality assurance and the development of software-development tools to innovative services and products for software development in the automotive industry. For additional information, visit www.itpower.de.
